Boston, 23 Court St. 30
May 27, '85

Mr. Geo. E. Davenport,

Dear Sir, -

I was glad to receive your note and learn of your decision. In issuing my call for the meeting June 10 (3 p.m. at Mass. Inst. of Technology) I will say: - "There will be exhibited about fifty views taken in Middlesex Fells by Mr. George E. Davenport. A sketch map of the Fells will be drawn

upon the board, and points of interest — hills, ponds, woodpaths, &c. will be pointed out."

I will draw the map. If you are present, you can say what you choose, and locate the places where some of your views were taken. If you are not present, I can locate some of your views, and point out nearly all the points of interest in the western half of the Fells, and many in the Eastern.

Several members of our Club are familiar with the Fells and may say something, viz. Mr. Elijah Wright, Mr. I. J. Chubbuck of Roxbury, Prof. C. E. Fay of Tufts College and others.

Hoping that you may find it convenient to be present. I am

Sincerely Yours
Roswell B. Lawrence

P.S. The photos. will be ready Thurs. evening.

I suggest that you send me for the meeting some of the cards on which you advertise your photos.

224, E. 10th St. 4

Dear Sir,

I enclose some pencils Schizaea which I gathered last August in the Jersey Pines & some bits of asplenium ebenoides which perhaps are better than nothing. Thanks for the Pampa ferns. Yours in haste

Wm. H. Leggett

224, E. 10th St. N. Y.

Nov. 22nd, 1873.

George E. Davenport, Esq.

Dear Sir,

I have a specimen of Asplenium ebenoides, having loaned to Prof. Eaton, as I suppose, the only one remaining. I never had more than two, have a leaf or two, which I have parted with, and the correspondent from whom I received them is absent in Europe for an indefinite time.

It would give me great pleasure to exchange with you and Mr. Hitchings, who has made me the most generous offers, which I have not felt rich enough to accept, as my few duplicates are not particularly rare.

I observe, however, on your list a want of Schizaea and Chelanthes vestita. Of the former I have one or two poor specimens left and plenty of the latter. You are perfectly welcome to what I send without return. Should you feel it necessary, however, to send me any thing, Pacific ferns named will always be welcome.

Yours truly.

Wm H Leggett

224, E. 16th St. N.Y. March 23, 1874

My dear Mr. Davenport. I mail you to day Bulletin for 1873. I enclose a few more bits of Asplenium serridus. I would like if I had time to study the spores, whether they are perfect and will germinate, but am too busy now with other things, and perhaps you can do it better in Boston. Mr. Beecher has hopes of keeping some roots sent me alive. He notices that the slugs don't touch Camptosorus or Asp. ebenoides, but do touch this, an argument against hybridity. — I have marked

your list of ferns, putting an S. o, [illegible]
there I have, and in one or two cases have
noted when my specimen is poor. If you
have any ferns to spare I shall be happy
to be enriched, but don't want you to feel
that there is any necessity for it. The lady who sent
them to me is in Europe, and has sent me the first
of a series of articles upon the money for which she is
dependant. I have made several attempts here as yet with
out success. One who could get her a paying publication would
win her heart. If a letter had been in my head, I should have taken a sheet.

224, E. 18th St., N.Y. Aug. 16th '76

H

My dear Mr. Davenport. The specimens of Lesken have come safely to hand, for which accept my sincere thanks. The Lesquerella, No. 4., is a form found here in the north which I think is not the L. minor of Lamarck, and is probably a distinct species to which I have to other correspondents associated various names, but shall probably settle on one when I come to describe the species. There is a Canadian form and a north-western one of which may be varieties of this, and I have not yet found certain characteristics to distinguish them. Nos. 1. 2. 3 are what commonly passes for L. minor, var. rakemulosa, but I believe

is really Muhlenb's L. Canadensis. It is found all over the Union. I take it that I may have been negligent in my correspondence and send as a peace offering some bits of Schizaea. By the way I find no specimen of Asplenium angustifolium in my collection. Some time when you have an hr to spare and are sending this way, please remember me. If a Mr. Chamberlin from Florida should show himself to you, I want to make the amends possible to him. He asked me my pronunciation of such words as acrostichoides. I said oi as in boy, but he seemed to think that there were two syllables. I never thought of it before, but it must be so. -oī'des, Gk. oeidēs, Latin- ōidēs, there is no diphthong oi in Latin. very truly yrs W. H. L.

302

224, E. 16th St. N. Y.,
Sept. 28, 1876.

My dear Mr. Davenport,

I return your drawings with the addition of Mr. LeRoy's from the Tenny Test. I should have kept your drawings but I felt at liberty to do so. I had no chance to see Mr. LeRoy before last Tuesday & am indebted to his kindness for a prompt return.

Yr truly,
Wm. H. Low

224. E. 18th St. N.Y.

Nov. 2. 1876.

Dear Mr. Sarcenet.

Many thanks for your favors. Your note will appear in the Bulletin. Very little time have I at present for botany, but the other week in walking with a friend thro' a piece of waste ground, I noticed a pretty rosette of leaves down among the grasses and weeds and was delighted to find it our Lesbian minor, which does not seem to grow with you. It occurred to me that if you remembered where you gathered the fine specimen of L. intermedia, so called, and

had leisure you might
have find them with the
rest leaves of which I
am very much in want.
Would you like to have a
set of the Lesbos which
I have there for determined,
but have not yet ascertained
wholly the proper names?
Yours truly,
Wm. H. Hayes

Pastures: near Fish Creek, west of Fish creek. — Rare, May, June."

He has also in his Cat. B. lumaindes x var. dissectum. B. virginicum, and B. Lanceolatum, Ang. — I enclose the expressage, which I have no right to tax you for. Yrs truly. Wm. H. Leggett

224, E. 10th St. N. Y.
Nov. 7th, 1876.

My dear Mr. Davenport.

You are very good to take so much trouble to send me Lichens. No. 2. is the kind I wanted and magnificent specimens. No. 1. L. major. has fewer but larger thalli I have ever seen. No. 3 is L. tenuisectus, very fine specimen. I am delighted with them. Shall cultivate some of the rests. What rich soil they grow in! I send you in token of my gratitude a fragment or two of asplenium ebenoides from what I have left of Miss Tuttle's specimens. I have not heard of her for years. Also I send some moss of the Scirpus which I gathered Aug. 16, 1874 on Crawley's Beach in the New Jersey Barrens. The Rev. John A. Paine, Jr., published

in 1865 a Catalogue of Plants found in Meiden Co. and vicinity, in the 18th Annual Report of the Regents of the University of the State of New York on the Condition of the State Cabinet of Natural History. Mr. Paine addresses it I believe Utica, N.Y., but I think I shall be able to learn on Friday after quoting Pitcher's description in Silliman's Journal, he adds. "Most of the plants found in the following stations are of the lowest forms and extremely variable; from one to seven and a half inches high. Stalks found usually one in a tuft and always separate from the spikes; in the smallest specimens a minute spur just under a single spore case terminating the short stem; in larger plants an oblong entire head, lower on a stipe bearing a few sporangia; in ordinary forms springing from below the middle of the stipe, short stalked, half an inch long, once incised or parted more or less deeply, with its fertile spike branching at base; in the largest specimens rising from the stipe near the root, long stalked, an inch and a quarter in length, three fourths of an inch broad, four times pinnately divided, [illegible] and all converged at the end, [illegible] three or four pairs of branches, the lowest branching in turn. Stem slender, [illegible] bending with the fruit. ——— Cedar swamps; shady borders of the State Marsh near Jerusalem hill, Litchfield, Herkimer Co.; on moss covered logs and mounds.
Lower 3

54, E. 81st St., N. Y.

Aug. 7th, 1877.

My dear Mr. Davenport.

Your missive & Seshea was very gratefully received I can assure you. 1, 3, and 4 are undoubtedly L. thymifolia No. 2. I take to be L. intermedia, a form you sent me from Medford, I suppose I gave it that name, but have given it other names at other times. No. 5 from Portland I do not feel quite certain about as there are no root leaves, but I guess it may be L. thymifolia, I have some specimens just like it from Portland, which look green, but I find no certain mark to distinguish them from L. thymifolia. If I had the ripe fruit and the radical branches I might be able to determine better; the growth is different from any thymi-

of him I have ever seen. Should you find your Lachenas with flowers open, I should be pleased to receive some twigs in that condition, and to have your notes as regards the color of the petals & stigma, whether white, pink or red, also some L. intermedia in its present stage, if flowers are still young.

I was very glad to receive your notes about Asplenium. I am going to try to have the Bulletin out by the end of the month. Have you any Pavlenderia. I find that it is trimorphic. There are three points in the flower, the top, middle and bottom. one style, and two sets of anthers. One plant has the style reaching the top, then one set of anthers is in the middle and one set at bottom. Another plant has the style reaching the middle, and the anthers in the other two places. Another plant has the style at the bottom of the flower, and the anthers in the other two places. I am anxious to

learn all I can about Pontederia, whether the three sets are equally fertile, whether unfertilized flowers curl up, and what insects are the agents of fertilization. I am also just now interested in Cassia. I think the pollen is squeezed out of the pores of the anthers by the muscular thighs of big bumble bees. If you see any please watch them.

How about Botrychium simplex? Is Mr. Miller's Wading River the true thing, or is there any true thing? Did you ever publish your paper?

Yours truly,

Wm. H. Leggett.

Can I do any thing for you?

54, E. 81st St. N. Y.
Aug. 15th, 1877.

My dear Mr. Davenport,

Your kind memoir of Lesbians came duly to hand, for which please receive my hearty thanks. I was much interested in the Specimens from Brunswick, Me. I have not yet examined them critically, but now have no doubt that they are the same as you sent me the other day from Portland, and which I then thought might be a form of L. thymifolia, but these additional Specimens, with the fact that I have a duplicate

If he can share you any.

Halenaria ciliaris, I used to find on Staten Island, I will write to a young friend there to look for it. H. orbiculata I don't know to whom to apply for it.

About Adiantum, I doubt Mrs. Gleason is no doubt an intelligent botanist, at all events should know the plant, and it is possible that it may have escaped somehow. But why does he say West-Farms 5 miles from Brooklyn? We have a village West Farms a few miles from New York, now in the city limits. It is on the Mainland, north of the Island. I never heard of West-Farms on Long Island, and five miles from Brooklyn hardly applies to the village of West Farms, which I should say was ten miles from the nearest part of Brooklyn.

Yrs truly, Lincoln Eggert

mature form from New Brunswick which for the sense we will call S. Canadensis, which is very similar to a northern variety from found in his cabinet, which I have in less mature condition, I— but to get out of a tangle I will begin a new sentence. Some of these Illinois forms sent me long ago by Dr. Darby & represented in Dr. Gray's & Dr. Torrey's collection, seemed so peculiar that I was inclined to make a species S. stricta, but perhaps they and the New Brunswick & Maine forms are the same, evidently, in your view, different from S. intermedia. I have not yet drawn up its character and, therefore, have not yet fixed upon its name, which I would if possible make characteristic. Did I not send you some of the New Brunswick & Illinois & his own specimens? S. minor, is a name of very uncertain meaning. Linnæus himself was confused about it, and Lamarck I believe figured it, on some imperfect information, the particulars of which I do not at this moment recall. Gray & Torrey both for the typical S. minor, what I call S. aperta. It differs from S. intermedia in the smaller fruit and longer and more spreading branches. Please write me what species you have, and I will fill the deficiencies as well as I can.

I do not know of any one collecting Solidago this season. Dr. Thurber tried the cultivation a year or two ago, I will write to him to know how he succeeded and

54, E. 81st N.Y.
Oct. 29, 1877.

My dear Mr. Dawbar.

I have been very much occupied with my business and have put off answering your kind note till a leading article came, which is very short.

First of all I must thank you for the Brunnich Lectures, which, however, I have not yet examined. They seem to have a different look in their present stage from what they had earlier.

Secondly as regards your article on the Birds of Botryshenni. It would be most welcome to the Bulletin. The only difficulty would be about paying for the engraving. What would that cost? I dare say if I had the data I could induce some good friend to stand it. At all events

I shall do my best to secure so valuable a contribution. Please give me an estimate as soon as you can. Thanks for the specimen of B. Lanosa. Mrs. Rust had already sent me one.

I enclose a fern found from Ames. I am told Mr. Burgess wants me to name. as it is possible that it may be readily determined by an expert like yourself there is an expert like myself, I refer it to you.

Yrs in haste

Wm. H. Seymour

As usual I am behindhand with the Bulletin.

54, E. 81st St., N.Y.
Nov. 14th '77

My dear Mr. Davenport.

In regard to the printing &c of your Botrychium illustrations I am inclined to prefer the heliotype process on account of its ~~saving of time~~ giving the drawing its proper size. There is one point not mentioned in your letter that I would like to ascertain about, and that is the plate. They offer to supply 500 copies for ten dollars, does that mean plates included, and will they forward plates and plates to me for that price? I have

not yet as I have published or given as in fact made out no distinctions; they are right to adhere to this old decision till a better one is established. In fact on one occasion Mr. Watson named a section for somebody whom I have forgotten, judging from my name in the herbarium, and named it wrong. The names of L. intermedia and ~~M~~ some others are only provisional, for in fact often I have settled what the species are, I shall have to try and make out what the various authors meant by their names. Meanwhile I get no time at present to do any thing with them. I was busy all day and most of the evening was me up. Yrs gratefully,

Lucien M. Lyggett.

I hope that you find no blunders in printing your note.

500 copies of the Bulletin struck off, but have an electrotype plate in case the number printed should run out, as is possible. I am not anxious to have the plate now, only that it should be accessible for the purpose aforesaid, and that hereafter the Club should get it in case of my death or relinquishing the editorial chair, presuming that the plate is to belong to us, I wish you to go on with that process, and we will find funds in this city for drawing & heliotyping. My main reliance for funds is away and will be for months, but I doubt not we can manage it notwithstanding. Mr. Lord has his plate from the Mon Co. and I think there can be no doubt about that being the understanding. You might keep it yourself for an indefinite time, in case the extra demand should exhaust the supply printed, that the same company might print more.

I thank you very much for your interest in my Lesbia studies, and for the interesting specimen of L. Canadensis in its full leafing, which is characteristic of this species. You should not be impatient with the Camridge men, as years ago Dr. Gray referred the matter to me, and thought I named his plants and sent him specimens of what he had

54, E. 81st St. N.Y.
Dec. 5th, 1877

My dear Mr. Sargent.

Mr. Robinson has kindly sent me a copy of your simplex, magnificent, munificent and most satisfactory. I have asked him and ask you why we can not have Wilder's monograph, or at least the substance of it embodied in a series of articles for the Bulletin with applications to American Entomology. For the present I thank you for one for having cleared up this difficult point so completely.

Prof. Eaton has sent me the article on Chirocephalus discoidalis Packard, which I hope to put in the double No. of Bulletin now

getting ready, ie for November and December, when I purpose also to notice B. Simplex. I am so harassed with work that I am driven to make one publication of the two nos. in order to get out the Directory of Females before the new year. I have been so thrown back with extra business that much yet remains to be done for the Directory.

I do not need the drawings for the January number before they are printed. I have begun raising funds and when ever you are ready for them let me know and I will send you a check for the whole amount, hoping to making it up. Yrs very truly,

Wm. H. Seyffert

54. E. 81st St., N. Y.
Dec. 17th, 1877

My dear Mr. Davenport,

I have received your very interesting letter and wrote an answer some days since, but on reflection did not send it. I thought if we had thicker paper for the plate I could manage to add the number, but I know I shall not have time for that, so that the paper must not be so thick that the plate will be broken by folding, but somewhat thicker than the Bulletin paper if you think best.

I shall be glad to publish your observations on Betrychium in whatever form your paper. I only mentioned Milde's monograph to express my desire to have the subject fully elucidated, as no one can

do better than yourself.

Has Comins yet published any nos of N.E. Ferns, I have intended to subscribe but have been so much occupied that it slipped my mind.

The Dr. will hardly be out this month, I have much yet to learn.

Yr truly,
Wm. H. Leggett.

P.S. Do you or the Nat. company send me the Nats? Would it not be better to keep the plate with you a while in case more copies are needed?

54 E. 81st St. N.Y.
Dec. 24th 1877.

My dear Mr. Davenport,

I enclose check for fifteen dollars as that is the amount you have named, but if any more should be needed I will send it you.

I have read your notes on vaccination with great interest and think very highly of them. They will not fill two sheets of the Bulletin. I heartily sympathize in the spirit with which you work and how the readers of the Bulletin will profit by it.

I am improving the holidays to complete the Directory, but feel that I was rather late in setting about it, especially

as I find every day of late
sufficiently occupied with
this own cares.

With great respect and
regard I am

Yr truly,

Wm H Seymour

54, E. 81st St., N.Y.
Jan. 7th, 1878

My dear Mr. Darwin.

I send you the first proof of your article on Vernation of Polypterus, which I have read over somewhat hastily perhaps, and on which I have marked various suggestions, which I submit to your approval. In P. lanceolatus, you say "It is interesting to trace the development of the bud in this species from the beginning" & and then do you mean "when there is only a mere slit in the top of the stalk, and when only a slight curvature indicates &c" what is

the slit? is the bud not completely encased as it grows? I don't quite understand that passage.

Perhaps it will be better whenever a species is named to have it put in italics, except those which are capitalized. Would it be better to have the last in full face.

You need not be in a very great hurry to return the proofs, as I know about how much there is will suffice, and I shall want some days to get up the other material for the January no. Yr truly

Wm. H. Leggett

54, E. 81. St., N. Y.,
Feb. 17th, 1878.

My dear Mr. Davenport.

I am very glad you are satisfied with the Vermeer article. It is a fine feather for the Bulletin. I received your note, and the Chelsea thing, but have had no opportunity yet to take it to Mr. Le-Roy. The note on Camptown will appear in February No, which will be so full, though double, that I fear there will be no room for your book for Southern Birds. If I can I will crowd it in. You wrote for some extra copies of the Jan. No, and Oct & Dec. Nos., but told me to wait to send them with the Feb No. If you want them soon, drop a card and I will send them.

Mrs. Carpenter, Mrs. Young, D. Cleveland, and J. G. Lemmon don't take the Bulletin. The last did, but dropped it or I dropped him, not receiving pay in advance according to rule, a rule which I find don't work as well as it ought. I enclose one or two Autographs which I would be glad to have you name for me, and to keep it you write.

Yours truly,

Wm. H. Lyyett

Your just issued pamphlet in Nov. Bulletin
Press.

54, E. 81. St. N. Y.
Dec. 9th, 1878

My dear Mr. Davenport,

I am getting to be an incorrigible correspondent — or rather non correspondent. I am very glad that the plate has been of service to Mr. Williamson, in whom I take fatherly interests. I dare say you are right about Underwoods aspidium marginale, but I could find no such form among my specimens, and think the description in the Manuals should embrace them. I made two dreadful blunders about Eaton's Article. In the first place I mistook his intention about publishing the

remark about the misprints in the plates of his Ferns, and in the second place, as he had written P. L. vulgare, and I in pretar; for pteris mechanically added o pedium. I enclose a sprig of fern, which I wish returned. Miss Tuttle found a patch of it in the glen where she found Asplenium ebenoides. She thinks it differs a little from T. radicans. She says she found it "in a hollow of the rocks, where no ray of sunshine had ever penetrated, and into which she had to creep. She found about a square yard of it. There was no trace of it to be found elsewhere in the glen. Asplenium ebenoides very plentiful. Her letter was written last April and, ah wretched me!, this is the first notice that I have taken of it.

Truly Yrs, Wm H. Leggett

54, E. 81. N.Y.

Dec. 20, 1880.

My dear Mrs. Davenport,

I believe the plate of the Coronation of Poltyches is in the hands of the printers in Boston. I have an application for a series of cuts of from one to five hundred from a Colonist who is getting up a work on ferns, but does not wish his prospectus circulated at present. Would you consent to them use, and if so will you be so kind as to learn what the printers would charge for the two three four or five hundred

Shall we put a paper such as that used for the Bulletin?

I have seen notes from Eaton for the January No.

Yours truly,

Wm. H. Lyons

Boston Sept. 16th 1882

Dear Mr. Davenport.

Your favor of the 14th inst informing me of my election as an Honorary Member of the Middlesex Institute" was duly received.

Please accept my thanks for yourself and the institute for the honor conferred.

I am strongly in ~~sympathy~~ with the objects of your society.

The study of Nature in whatever department, has a tendency to enlarge and elevate the minds of those engaged in it. And your section of the country is peculiarly adapted to the purpose.

Although born in Boston, some of my happiest days have been passed in the Middlesex Fells, which have been familiar to me from childhood.

There I first saw that vegetable wonder of my boyish days, the White Huckleberry, and fifty years later I picked it again in the same place, and apparently on the same bushes.

There under a rustling rock, called "Pewee Rock," by the old grey headed man who first called my attention to it, the Pewees still build their nests, as they probably have done for hundreds of years.

There still grows the now rare Linnaea borealis, and there I have collected the still rarer plants, for this vicinity, — Bleocharis Engelmani, var. detonsa, Scirpus supinus, var. Hallii, and Echinodorus parvulus, growing in company with Eriocaulon decangulare, which is very abundant in the same locality. Some parts of the Fells still retain the same general aspect they bore more than sixty years ago. Not a tree or shrub, as far as the eye can detect, has been cut during that time, and let us hope they may long be preserved.

"The groves were man's first Temples," and they are still his best. Here all can worship; young and old, male and female, of whatever church or party, all meet on the same common ground. And to those who worship here every day is a Sabbath.

"Wealth cloisters boughs, each floral bell that swingeth,
And tolls its perfume on the lapsing air,
Makes Sabbath in the fields and ever ringeth
A call to prayer."

Truly, "There are tongues in trees,
Books in the running brooks,
Sermons in stones,
And good in every thing."

With many thanks for your kindness,
I am, Very truly yours.
E. H. Hitchcock.

40 Chambers St.

55
1

Sierra Valley, California
Dec. 16th 1873.

Geo. E. Davenport,
8. Province St Boston.

Dear Sir.

Yours of the 8th inst is rec'd.

Have only been collecting Cal. plants for two seasons, therefore my collection is but partial. Am at work now classifying those of last season, will forward a small package to you soon embracing all the species of Ferns I have, Shall remember your request on my future travels, & will exchange gladly.

Very respectfully,

Yours &c. J. S. Lemmon,

**J. G. LEMMON,**
Sierra Valley, California,
**Amateur Botanist, Lecturer, Microscopist and Collector in Natural History,**
—AND DEALER IN—
*Seeds, Bulbs, Roots and Dried Specimens of Rare California Plants;*
—ALSO AGENT FOR—
The most popular and useful Microscopes, Telescopes, and their furnishings, Scientific Books, &c.

Oakland, Cal., July 26 18[illegible]

my old stamping ground — Sierra Valley & the high Sierra — studying new phases of the locust scourge still afflicting that region. I find a lot of interesting mail matter awaiting. among it a letter and Bulletin (ct. 6) from Prof. Eaton, and a letter and Bulletin No 5 from yourself.

Thanks for the favors and for the warm kind words. No one appreciates such congratulations more than I.

You shall have the specimens I have rooted ferns you desire. but not now.

Am too busy, getting ready for meeting the great botanists at Shasta on their return from Puget sound.

I hope & spend several weeks with them & study with them our forest trees, such keen observers as Mr. Engelmann & Parry it is well & be with especially as I intend to get employment as instructor in Botany in our Oakland schools this winter.

Too bad that my new ferns were not received in time & get into "Additions & Corrections" & so be widely known, as I want & sell as many as possible for my sole revenue for expenses is derived from our poor botany.

Very truly yours. J. G. Lemmon

New Orleans Dec 17 1884
422½ St. Charles Ave,

My dear Davenport,

You see here we are, and I assure you we are hard at work mounting and labeling plants for the grand exposition.

Have not seen better specimens or better work upon them than we find in our coll.

Have over 100 ferns mounted, just enough to make us regret the lack of certain other new species.

Can you not send us - if only for this fair — good specimens of

Notholoena Pringlei. } (Also any other
Cheilanthes Parishii. } new ones.)

You remember I have only a little piece of a frond of the first, and never had any of the latter.

Wish you could see. Mrs. H. P. Pringley of the San Gabriel Valley, Los Angeles Co. California.

Have only about ½ of our work completed, the working every day & evening, & carefully label & mount so many plants requires a long time,

If you will excuse the seeming egotism I will enclose clippings from the papers, just to show you better than I can now write it, what we propose to do this winter,

We had to have a severe seasoning at first for several days, both sick, Better now and in usual health, — of which there is great need with the work before us,

Tell your Boston friends to inquire us out. We exhibit in the States building, California section,

Shall expect during the season to meet with a great many eastern people,

Hurriedly but cordially,

Yours,

J. G. Lemmon,

1205 Franklin St,
Oakland, Cal, Dec. 23, '85.

Our good friend Davenport,

Your very
[illegible] kind [illegible] like the voice of
a dear friend [illegible] the far East;
[illegible] your under
regards so beautifully expressed,
Our home is indeed desolate,
the chair of our dear mother, va-
cant, her sweet face and cheery
smile no more, her voice mute,
but her memory is vivid and
rests like a benediction upon us,
I have collected the various
tributes published in her honor
corrected, enlarged and arranged
all in a "Memorial," soon to be
published in pamphlet-form,
While and your a reply,
am in the intervals of dis-
tracting cares I have labored
not soon need revising.

By the way I look to you
to settle the name of that
very scaly Chil. from the face
of high vertical rocks in S. E. Ariz.,
and very near Baker's C. Scariosa,
It is not quite that nor yet
C. myriophylla. It was very striking
when first spied out of crevices in
the Chiricahua Mts, with my knife,
It stands between them and I
think is sufficiently distinct to bear
a specific name. Perhaps you
connect it with Ch. Fendleri, as a
var. you have not named,

Please give me the names of
such species and vars as I
may not well know are found on
the Pacific slope west of the
Rockies, and north of Mexico, (in-
cluding British Am. & Alaska,)

Wishing you the compliments
of the season for yourself & fam.,

Yours cordially J. G. Lemmon,

my "in arrangement" method of studying ferns.

Have it now well-nigh complete. Next is the re-hashing of our Pacific Slope ferns for a second edition — in which I depend solely upon you as I stated in a former letter.

I hope you can soon, without injury to your business give me the items I desire.

Perhaps it will be difficult so to do since the large amount of work which the lucky Bridge has brought to you.

By the way you say you can send me his new ferns!

Please do so at whatever cost, I have lost (no doubt) all our specimens exhibited at the New Orleans fair, and they were the best we had, but of course we have a second rate class on hand yet. If to these we can now add, a fond of Ad. bridgesii! and Pel. pulchella P. aspera, Chil. leucostoda, &c,

After the holidays will be time enough. But I wish you to surely send me any items bearing upon the following points.

I have no positive knowledge that any ferns but Polypodiums are found in my Pacific Slope region. This simplifies my study a great deal. Unless you know of a surety that the Dryopteris do occur in New Mexico or Arizona I will not have to admit them, and if they are in the south east corner of Ut, Co, still I will not have to receive them — for you see I take the Rockies as my eastern limit.

After that I am anxious to include all the Polypodiums possible, so that this edition will

my favorite volume for preserving fern studies by a "Triple Method," which greatly delights me.

Will send it by this mail & he vised by Dr. Gray.

Then next winter, perhaps, will want to publish it & D. does not demolish my pet method.

Then your assistance in bringing my work up to the latest discoveries and revisions will be all important.

Both in fair health - not ill more than ¼ the time — and very busy.

Please write a line and tell us of the latest discoveries, &c.

Mrs L. joins me in warm regards to yourself and family.

Cordially Yours &c. J. G. Lemmon

Oakland, Cal.

1205. Franklin St.

Feb. 14, 1886.

Friend Davenport.

Just a line to absolve you from your kind agreement to furnish me some points in fern lore.

I shall not need them this winter. Cannot reach the subject of revising and printing my "Pacific Ferns" for want of time. The block

on which is our herbarium has been sold to a R. R. Co. for a depot and we must remove soon, — hence all scientific work is suspended.

It is a dreadful thought to me to have to take out the hundreds of cases and thousands of plants here stored, and to try to find places for them elsewhere.

Four years of preparation of herbarium rooms all for nought. So much for being too poor to own your home & grounds.

But the interruption did not come until I had nearly completed

HERBARIUM
COLUMBIA COLLEGE,
Fourth and Madison Avenues.

New York, Oct. 13th 1876

Dear Sir

Mr Leggett sends me your letter wishing me to answer it.

The specimen figured was from Prof Hitchcock and all the specimens are glued down, we have also the following Plainfield Mass Dr J. Porter, Hopewell New Brunswick. J. Torrey? Middletown Conn. J. Barrett, and Canada Pursh from Lambert's Herbarium.

I remain

Yours truly

P. V. Le Roy

Curator

New York, Oct 19 1876

Dear Sir

Have you any duplicates of the list sent to spare as some we have in the Herb. are not very good.

Polypodium falcatum, Kell. ×
× intermedium; H. & A.
Notholaena tenera, Gillies
Cheilanthes Lindheimeri, Hook.
microphylla, Sw.
leucopoda, Link
Eatoni, Baker
Cleavlandii, Eaton
cooperae, Eaton

Pellaea Ornithopus, Hook
× var. bracby.
Aspid. sp. var. dumetorum
× cris. v. Clintonianum

Any of the above would be very acceptable

Truly Yours

P. V. Le Roy

Peekskill Ny
June 29/80

Geo E Davenport Esq
Dr Sir

I enclose Postal Order for Three & 25 dollars.

Gerard notified one and writes that you want some more numbers of the last.

As I am on the sick list and the Doctor forbids my going to the City - I am obliged perforce to stay "put". He promises that I can go down in two weeks from this day, when I will mail to you the Nos wished. If you think that you will want more - be kind enough to let me know.

Truly Yours
P. V. LeRoy

Columbus O. Dec. 29th 73

Gen. J. Davenport Esq

Dear Sir.

I am sorry to be unable to answer your favor of the 17th Inst. I know nothing about the discovery of Botrychium Ternatum in the Yellow Stone part. I have never been there. You have been probably miss-informed. I am related to the Hayden survey merely as paleontologist.

Very resp.

A. Lesquereux

P.S. After all I may have found B. ternatum above Golden, this year on Clear creek. But my specimens of this year are not yet packed out and not examined. On what authority or by what information do you believe that I have specimens of this year on hand? I may have given some out at Golden but I can not recollect any body. Any how if I have this year's specimens in my plants I shall be glad to send

your specimens if I have.

Dear Mr. Davenport.

Enclosed please find the list of "desiderata" of the Visit American firms which you kindly said might send you. I failed to bring the list home in the storm to-day & did not have a chance to go in and work at the rooms again till a few minutes yesterday.

I am sorry to say that I shall not be at the A.M.C. rooms at my regular hours to-day. (thought some one else will have the room open at 3 P.M.) or

account of going to the funeral in old Lunch.
Unless I should go to the cemetery which is not likely, I shall go to Boston after the service & be at the rooms between five & six, possibly 4.30 - 6.30.
I mean to go in next week Thursday (the 18th) long enough to do some work - notably from 2.30 to 5.30 P.M., since I shall not accomplish much to-day.

Hastily
Agnes H. Lincoln.

Mr Geo E Davenport

Dear

Sun 7 4. I Came duly to hand. A thole Letter in the season I was so glad to avail myself of Mr Torr's Find Tax a list of all I have and probably could be named. But with the aid of the Specimens you sent me I think I shall be able to identify nearly all that are to be found here. I hardly Hope to find "Clandestina Vulgata" here. but "Pellucida" I found a month ago and have a number of Roots growing. I find Campbeam growing with it. The banks of our River are rich in Ferns

I have collected roots of 20
species already this Spring
but look scarcely looking.
And when the Dicentra
kinds start into growth I
will be able to find a number
more. I have all my
life admired ferns & gathered them
for their beauty. But never
took them up as a study
till last fall. I find it a
most fascinating one.

I have both J. Smith &
Ferns of Ma. It is an Elegant
work. I hope for Lord
& Nuttall Cordially to your
Correspondents to second for
her.

I may need to send
for plants other than ferns
to be named, & if I need
not to be asking too much of
you.

Very truly Yours

Alma Lord

Mr Jos E Dawson

Dear

Sm I find 16 to 17 ft is ok Land.
The rock where I find Camptonia
growing is Limestone Rock and
Limestone. a loose slaty Kind of
rock. Camptonia was growing
near the base of a shady cliff facing
West. in a thin layer of leaf mould.
Pellaea atropurpurea growing with it so that
the roots were matted together. I
brought home with me a clump
of Rock no bigger than my hand
that had Camptonia. Pellaea. Asplenium
Ebenum & Cystopteris fragilis growing nicely.
The other locality where I
find Camptonia is on a wooded
bank of River. growing in Leaf Mould

on a hillside — over a small loose
stone. Pretty Earl. I will
be glad to send you some the
Princess of Chilianthus
Princess I can get. But unless
I can find it growing somewhere
else — I am afraid you will be
disappointed in size of stem
in the locality I
found a space not over six ft
square and all the plants were
small as the specimen I sent you.
Would specimen as small as
that be of use to you? I will
also take pleasure in sending
you some young plants. I want
so to find some good books such
work I do not know I can get. If
I can't find any more I will
send you some plants that I
have. I will be a pleasure
to me to send you anything I can
that will be of any use to you.

POUGHKEEPSIE, N. Y., July 4 1879

Mr Jos E Davenport

Dear Sir.

Your favor of yesterday at hand. I enclose list with Specimens marked. A large number of them I have Specimens of but they are hardly good Enough for mounting. I have some also among those marked × that were taken from Cultivated plants in Greenhouse. Please tell me if a Specimen of native species taken from a Cultivated plant is a proper herbarium Specimen.

It is sometimes so much Easier for me in my practice to get a proper Specimen in a greenhouse than in any other way. I have no Correspondents to call on.

I send for a check book

as I understood you to say you mounted your ferns on. It is of a size to fit bottom of some Cons 14×20. I like this size 10×14 better than 16×22 but I find that 16×22 in the standard size among botanists - and though I might have misunderstood you. I hope not for I have a good many mounted. This is a size that I send out but I have used sheets twice as large and folded them as for myself — Do you mount other plants on same size sheets. — I was looking at a collection of ferns belonging to W.R. Gerard recently. They were all 16×22 and gummed on. Do you use only bits strips of paper to fasten on the sheet.

Do not think me unnecessarily ignorant. I want to mount my ferns so I may not be ashamed of them or be afraid

We have anyone look after them.

Am glad to hear you have our Catalogue under copyright. I think I ordered 5 copies.

Did you ever write a piece work on the Polytechnic a few years ago. If so is there a chapter by Hoffman & the second smaller Spain. I would like to have a copy. A friend of mine has had it some time & my wife wants it but I have not seen it. Please send a copy with the catalogues or send my name to the publisher.

Now about the

dreams I need. If you
can softly miss dreams
I am I need like it.

Send as many as you
can or only a few. I shall
keep my list that you may
send later. When the
Change is over be satisfactory
to me.

Yours
L Clemens

POUGHKEEPSIE, N. Y. May 17th 1879

Mr. J. B. Edwards

Dear Sir your 13th is rec'd. I am glad to know how others mount furs & thank you for the very full instructions you give. I am using your size folded skin although do many prefer larger size, & like it better than the regular or standard size in use by others. Not being a botanist I suppose I may suit myself. I am using both paper clips & fold brain skin. The latter is troublesome to use. I am just getting so I can use it at all.

I am much pleased with my collection of specimens & I can't thank you for again

for Jarrow. Glad to get the Northern Candida. I had a Card yesterday from Mr Chadwick. with 10 Specimens. most of which I already had. There was a L. Swainsoni that looked so much like a Ch. Lanuginosa you send me that I thought that one of them might be wrongly labelled. Do they resemble Each other so much.

I have not seen your article in Bulletin or Botanische. would like to & if you have spare copy would be glad to get it. I thought of subscribing for the Bulletin. it costs 10/- for Jour d'Orleans. a. to my disastrous do not trouble yourself about it. If you have one or two ab. pressed ask myself. I did not expect to get them yet.

Yours Sincerely

CLARENCE LOWN.

Mr J. E. Deacon Esq

Dear

Your catalogue received. I
can see if much use to me and I
think to most farmers & stockmen &
collectors. Your Lantern seems very
compact & I hope it will suit you
for me. I am glad to see
that you have some
very specimens in your collection.
I did not think of your
poultry flea in your own Lantern
& I myself have selected other
ones. I should enjoy looking
through your Lantern very
much. I notice your
note in Cumfatorum. I cannot
think that the fine has a very

strong foundation for limestone.
and for coral not Lasting
for coral are Low lustrously
it grows in a mountain range
a few miles for Polyparia or other
rocks than limestone. I found small
patches in the rock all about Potiya
but in the one place it grows for
large patches often yards in size.
This year I will visit the
limestone & write report.

Yours Truly
P Langdon

POUGHKEEPSIE, N. Y., May 14 1879

Mr. F. Davenport

Dear. Thanks for the fine rock of Chrysanthemums. I had been saving a place for it in my fernery. My ferns both Tree & Rock Fern & a large tub of Gold & plumed Eulalia the Spring are looking well. Dear, your Chrysanthemums come up well.

I visited some Greenhouses a few days ago. Found Cinerarias growing very luxuriantly but not more so or Lushly as much, as that I have before spoken about. I had always found it a much more difficult matter. But this in the Greenhouse was growing

in quite dry position. I
also found what I had been
a very rare Fern with me. Pellaea
atropurpurea (Gustafsonii). Also was much
pleased to find Asplenum Ruta-
Muraria which I had never
before found. This was one
of my short trips taken late
in afternoon but was one of
my most successful.

I did not know
Pellaeas which had been found so
far south as this but I see Jun
knows it from Lycoming Co Pa, so I
may have some chance Sunday
it's here. I am going to make
a good search for Cheilanthes this
Summer. But many of our
Fern Collectors have found it here
that I know of.

Yours truly

POUGHKEEPSIE, N. Y., Sept 25th 1879

Wm H. Davenport

Dear.

Yours of yesterday & package rec'd. I thank you for specimens. I did not expect you would find so many Ptis aquilina & all good specimens too. I find none of them, Excepting greenhouse specimens of Ptis caudata & Asp. Nycrophyla.

Mr Chadwick Coopman was in to Poughkeepsie & I was glad to get it. I am very much pleased with the whole lot. A count. I owed return the favor in kind.

I send you a package by this mail as follows.

1 P. vulgare Pokeepsie August
2 P. " variety Greene Co " 1st
3 P " Pokeepsie "
4 Aspl. Ruta muraria Pokeepsie (limestone Sept
5 " Montanum. Shawangunk Mts near "Lake Minnewaska" 20 miles from Pok. Sept 19th "
6 Pellea Atropurpurea Limestone Pok. Sept
7 Aspid. Acrostichoides Rhinebeck Greene Co Aug 1st "
8 Pellaea gracilis Ulster Co near Phoenicia

I put in some of the common ones to keep make up package. #2 is a very odd (to me) form of P. vulgare. I send #1 that you may see how finely cut it is.

#5 I have been all the year trying to go after but have been so busy that I did not get started till last week. I sent you 2 or 3 Roots on Monday. It grows in crevices of sandstone rock on tops of Shawangunk Mts. in shady places under overhanging rocks & often on Exposed rocks, when it is smaller. It must be very hardy for a colder place could hardly be found in the Country than that where I got this.

CLARENCE LOWN.

POUGHKEEPSIE, N. Y., ..... 18

He A. Accessible Branch I took from "Stony Clove Hotel" a pass in the Mountains on the Road from Phoenecia to Hunter. A place where there is ice the year round. I took ice for examination of rock on Aug 1st this year. Our object in going there was to search for the subterranean fauna. I should think other Alpine plants (ferns &c) might be found there. But did not have time to look around much. Pelion fossils is very small. But I hope to have some better from some locality soon. I may go up there next Saturday & stay over Sunday. P. fossils was not on limestone. I send you the

book I have & nearly all. If
I get more & other contend I can
come. It may come handy
for Exchanges.

I have not seen Mr
Coleman nor books. I am
afraid I should have to buy it
if I looked at it. I can't
afford it until Eaton Fam is
completed. & then so very fain
that I would not be sorry to see
it then further extended.

Mr Lo sent me a sample
Etching some time ago. I think I
may make myself a present of
it about Christmas.

Ever Yrs

POUGHKEEPSIE, N. Y., Oct 8 1879

Mr F. E. Dawson

Your postal is
rec'd. The Polypod. plumula
was sent me by you about
a year ago. It is not one of
Mr Smith's but is marked
C. E. Faxon 1873. It is a
fine specimen & I cannot tell
for certain what it is by the
specimen itself. but Mr Faxon's
name is sufficient guarantee, is it
not. I have just returned
from my 3 days trip to the Mountains
I think that the frond has
killed Pellaea gracilis for I found
not a trace of it, not even on
the same ledge where I collected

it is July. Aspidium aculeatum Braunii I found in great abundance & found a fair lot of specimens. In a 2 mile walk along the bed of a Mountain stream I should judge I saw a thousand plants. from 6 inches to 30 in high. This locality is in the "Ox Clove" about 5 miles from Rhoneira. The specimens I found are not far from "Stony Clove Notch" some 10 miles from the former. Besides these I found it on a Mountain side quite distant from either growing in company with Aspidium Acrostichoides & Aspid Goldianum both of them in abundance. I am sorry about P. fragilis. but you must not expect to find plenty.

Yours
Thomas Conrad

POUGHKEEPSIE, N. Y. Aug 25th 1880

Mr. E. Dewey

Dear Sir I find four card tree on my return from a 10 days trip West. I brought it Sat. and planted it close proximity to A. Ebenezer & Compton to Ebenezer. The tree finds here growing in a space not over 10 miles in diameter, and in the vicinity Compton's are very abundant. Ebenezer's I saw so. The Rock tree Limestone & Cedar tops were growing in the loose fragments fallen from the ledges. The stock where Ebenezer's grows is rather shaded in the ledges there are 3 of our limestone loving trees Compton's, Pellaea atropurpurea and Cetrarach. Have seen two plants of Ebenezer

.) around 3 fronds — 2 about
+ 1 fertile. I enclose you the
fertile frond. You may keep
which one you please returning
me the other.

I sent the other sterile
frond to Mrs Frank, & the
Ferny Bulletin, and a former
Polypodium. I find his reply
here on my return. He considers
it very interesting & writes it
in the bulletin. I'm sorry I did
not think to send with a note
for the bulletin, as you might have
made a more intelligible note
than he did. It will be
noticed in September number of the
Bulletin.

Here is one more
frond in the place which I will
pick soon. I have forwarded it
to Mrs. Rust (grower, Mass.)
am indebted to for some of my ferns.

CLARENCE LOWN.

POUGHKEEPSIE, N. Y. ..... 18

I first visited the Countess Cary in the Spring of 1868 and about the 1st of Nov. I Crossed the A. Ebrucs Camp. saw lizards in Cumbria abundance & made up my mind to look for some lizards in Spain for Ebrucs. and when I visited the ground again a month two weeks ago. I hadn't looked for more than 20 minutes before I was rewarded. I consider this a very remarkable part of it. as I never before I have always stumbled over my specimens by chance or accident.

Now as for the Work I have done, which I take to mean

that you will try to stop by and see me if my headache + boils don't get you first. You may be a month too late for Lunaria pur. Linn. soc. I had a pleasant week in July in and about Springfield Mass. + intended to go to Boston + Cambridge but I was detained in Springfield over my time + had to curtail my trip.

I found a variety of Cal. Catskill Mts. collected acadialum Braunii + B. Lanceolata Matricaria.

I noticed in an old Bulletin that Lygodes Palmatus and Aspid. Acrostichoides have been found in Ky. Ohio + Ill so.

Edwards in his Cal. atlas has Asplenum Pinnatifidum down for Ky.

In my last trip I found B. Lanceolata + Matricaria in Lackawanna Co Pa. and B. Lanceolata in Chautauqua Co Ny.

From Your Chapman London.

I do not know when the Bulletin is dated, but perhaps it is not too late to change its name to Eburoides.

C.L.

POUGHKEEPSIE, Sept 22nd 1882

Prof. E. Davenport

My Dear Sir I have just returned from a days tramp in the Shawangunk Mts where I went for a supply of A. Montana. I see it of course & found both it's forms on same ledge, Asplenium Bradleyi. Is this a new find in my state. I have never seen any other station for it recorded, except the Newburgh locality where Prof Dalton reports it as found by him in 1864. But mine that are specimens or only an undetermined

variety. It is very scarce
where I found it, but I
found half a dozen fair
rooted specimens & will send
you one in a day or two
when they come out of press.

I also found Var
Obtusilobata. in same place
where I got it two years ago.
With a fertile frond in the
whole patch. But 20 of the
Var on a total of about 40
plants. The plant is more
Erect summer & plants are all
stunted. Plants with dry & plant
growing vigorously but small.

Very Truly
Clarence Rowan

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Nov 14th 188 2

Mr Davenport

I have just returned from Rugby Tenn. I had but few opportunities for collecting & found most of the rarer forms. I brought back Asplenium montanum, fissidens & parvulum & P. incisum any of which you are welcome to if you want them. In a three days ride through Tenn I saw Lycopodium palmatum in as many as 40 localities. Every stream was bordered with it & almost every moist place in the woods covered with it. Sometimes it was dwarfed but often it was 3 or 4

Occasionally covering Everything
with snow each of it. At one
place where we camped we might
it has growing as moist rocks
along a very steep ravine.

Aspl. pinnatum was found
Common on limestone. Aspl Ebenum
on sandstone. Did not find
the forms on anything but limestone
& the latter was rare on limestone.

I did not get a fair stock
of anything but Maidenhair.

I have a few ferns for
Stockbridge friends botrychiums. If
You Care for any I will send them.

Yours Truly
Charles Lowe

OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Dec 22 D 188 2

Mr Dawson

Yr. The Ophiotaurus
was rec'd some day ago &
was very welcome & Sad
but - very small & poor
Specimen Pl. Please accept
my thanks for it & my
apology for neglecting so long
to make acknowledgement.
I expect a set of Mr
Simons Fens in about a
week & feel pretty sure of
getting Good Specimens. In
Cal. Correspondent Kindly

I found it difficult to
write & will do so. I have
not yet read note to
Butler or A. Bradley but
will do so soon. You would
have made the note an
interesting one.

Truly Yours
Alexander

LOWN & SON,

OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Dec 8th 188 2

Mr Davenport

I send you a letter just rec'd. You can see what Prof. Peck says about the Bentley Statue for a Buckeye. He took neither Cotton Jr I showed him my specimen Jr Specimens in State Collection & Wm I assured him I understood that I had found Bentley & Wood but a specimen for some Collection.

Truly Yours

Chas Lown

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Dec 30 1882

Mr Geo E Beaumont
Dear Sir

Yours rec'd.

Have no objection to your using Prof Peck's letter in your Bulletin No 6.

I find that I have but one B. bryoniae var smilacis. It is not rare & think not I have not taken the trouble to collect it. It is found by tens when the opening ends & the vine (so called) begins. This one is as small as any I have ever seen & I fancied it for that reason & also because

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE

POUGHKEEPSIE, ..... 188

it was very late in season to find the Fruiting Spikes in good condition.

You must not bother about returning it.

Sending my Superintendent's Specimen of Ebracides to Prof Peck with leave me without a representative of that species excepting a mere lump of the Poughkeepsie fruit. a number stems found about a inch long. I think you for to find me some fruit a very kind act & thank you for it. If the cold. can spare it I should be glad to have it & perhaps

I may some day be able to return the favor.

Best Wishes,

Ahmad Zaini

"Keeping Your Time" + plenty of Time.

OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, July 5th 1883

Dear Mr Davenport,

Yours of 3rd inst
the "Edwards" is just received. I
am very glad to get it &
thank You for the favor.

Mr Lown tells me that
they have all been sick & that
they have been moving. & in
answer the correspondent
how he unavoidably neglected.

Work is a very good talk
I notice in the Bulletin & I
am obliged to you for notice
of "Wadley." am glad that
you did not pin the locality
closer. I thought I am sure
you to omit the [illegible]

but now afraid you would think me "easy quick". But that I am pretty sure by the looks had been settled, the ledge or cliff and I was sure we looked over before I have another chance. I am going to try & get there about June 5th - first trip & then agree in Oct. I am going to find something in it. But I don't know what. More of the Bentleys anyway.

I need some checks badly. do you know of anyone wishing selling out a complete list soon. Mrs Edwards writes me that Mr. will not as his old address has not been taken.

Please give me the

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, 188

Locality of Curtis's "Northern
Neck" that you asked me
& also tell me if you have
determined it yet. I think
you said you were going
to send it to Mr Baker

Very Truly,

[redacted]

Please send you what you
want of Truman Jones when
they come. What is your
Ch. Village. I send such
brand of it. Hope
you find remedy now

Hi Dianne are good to
your Kentucky.

Love Tom

Diane Tom

POUGHKEEPSIE, March 19th 188[illegible]

Mr Davenport

I send Lemmon
Farm by the mail & enclose
stamps for return postage.

Please note Eaton
var laxum & the omission of his
name if they ~~have not~~ are
recognized varieties. They ought
to be. pluviphyllum is about
naked on upper side while
the other is very shaggy.

Its ~~insanis~~ does not
appear to be so distinct. I
have not looked them over
as all my stuff is noted
the above when putting them
up for the mss by Clarence

LOWN & SON,

Manufacturers of

OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, March 23d 1883

Mr Davenport

I enclose
letter for Mr Lemon. Thought
you might be interested
in what he says about
some of his farm.

Return package
at your convenience. Don't
hurry yourself. and anything
that you may want
please retain.

Yours
Lown

How about the check list? Will
they be ready soon.

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Apr 21 1883

Dear Mr Dawson

Your favor
is just rec'd. We not for a
moment think that you have
offended us. It has been
through neglect only that I have
failed to write you after
receiving the first book & subsequently
receipt of your pamphlet for which
I thank you & shall be glad
to subscribe for a number of
your complete list & supplement
when printed. As to the stamps
I thought it only right that I
should pay it back again
as it was a favor done

I have the Jones looked over
by you before placing in
my coll. Of the 155 numbers
in your list I find that I
have 144. a goodly number I
think + does not include the
new Arizona species. Mr
Rusby writes me that he is
about starting for Ariz. I hope
he will have a good season
+ find some new things.

I am always on look
out for new varieties in the
Compositae + in fact in all
other kinds. I have some
very ranging forms in some
species. Is there any particular
new variety in Compositae that
you wish?

Very Truly
Charles Frow

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, May 7th 188[illegible]

Dear Mr Doolittle

I have read the article carefully & copied the description. The Gazette I return by the mail with thanks for the favor. I will have my eyes open for it & hope to be able to report it.

Do not think I have seen it as I would dabble last notice the narrowing part.

About 1st June I expect to visit the "Bradleys" locally & make a Round for more of it & for "Punxsutawney" too.

Please put me down for [illegible]

I hope you win
Seven subs. Enough to
transport you in fourteens.

Yours Truly
Rowland Dean

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Sept 15th 188 6

My Dear Mr Darwin

I am glad
to get your note yesterday.
I suppose you have been
wondering for a long while what
has become of me. I hope
you will excuse my neglect
in not writing for the
catalogues & list. I do not
at the moment know just
the amount but presume I
can turn to my ledger in
Buffalo or you can let me
know. You say you have
been trying to remember your
friends. How is it then you

poor this summer. Has
Mr Pringle returned. I
have not been away this
summer & have done nothing
but local collecting & have
found nothing new or rare. Have
not yet found the new Campion.
I visited the Bradley locality
in July but it was a very
bad day & I did not explore
the cliff thoroughly. Hope to go
there again. I suppose
we will get new ferns from
E.M. this fall. I see that Mr.
Pringle has a new Chrysanthemum described
by you. & doubtless Mr Ruby
will have something new also.

Very Truly
Clarence Moore

LOWN & SON,
Manufacturers of
OAK AND CEDAR WOODEN WARE.

POUGHKEEPSIE, Sept 20th 1883

Dear Mr Draper

Your $17 — is
rec'd. I enclose the amount
due you so long delayed.
Glad to hear that you
had such a good time
on your vacation. Hope
you have seen all the Centry
but suppose it is very like
home & mine Tramping
grounds in the Catskills
minus Summit aspect but
doubtless having more
alpine shrubs & plants.
Am sorry that our
Orange Trail was such a

how [illegible] Such a
thought is one of the
things to expect in the
Department.

Yours truly
Charles Lee

LOWN & SON,
MANUFACTURERS OF

POUGHKEEPSIE, N. Y., March 16 - 1886

Dear Sir Davenport

I wish to ask your opinion as to poisoning Foxes - I know it is usually done with Strychnine & Specimen - but I neglected it with my Foxes at first & now my Coll is so large that it would be quite an undertaking to poison them. - besides harming the beauty of many kinds -

My Foxes are some 8 years old & I have never known anything about them to indicate that any such - was damaging them -

My Coll is so good that I do not want to see it deteriorate though want of poisoning if such is necessary - but do not want to do it if it is not necessary - Will you kindly let

What you think about it -

How would a porcupine
Chart of paper placed in each
folio answer the purpose -
If effectual it would be so
much easier to do & would not
injure the specimen as posing
in liquid would -

Are you determining
the doubtful forms of Mus
Peromyscus Mexican coll - I have
several marked doubtful &
would like to get names when
they are determined -

Yours truly

Clinton Lowe

LOWN & SON,

V

POUGHKEEPSIE, N. Y., May 31 ? 188 6

Dear Mr Davenport

Your pamphlet
for which I am much
obliged came some days
ago - I have Pomeys
1885 Jours + among them
have # 456 which he called
"trichotaxis" ah Fisk Mel
Friesby labelled "Chilrus
Var pilosulum" Coll. near
Christiana Oct 10th. Perhaps
You can tell me if there
is the form you finally
determine to be "trichotaxis"
I note that Your

numbers in two notices
do not agree with the
printed labels -

Should be 455
Davis 455 = Dao 445
" 469 = " 466 - all right -

What I suppose is most
likely to be an Error in
Your type - But would
like to know -

Do Mr Pak
Chubachus get 2 + do You
know where he Expects -
to return -

Faithfully
Clarence King

Dec. 14, 1904

Mr. George E. Davenport
Medford, Mass.

Dear Sir:-

During the last three years I have been making a field, laboratory and herbarium study of the genus Botrychium and hope to continue it through several years to come. At present I have not access to your most important papers on this genus and I am taking the liberty of asking you for separates of the same provided you have them at hand. I especially desire to obtain "A monograph of B. simplex" and "Vernation of Botrychia". I shall be pleased to provide whatever remuneration you may deem adequate.

Very sincerely yours,
Harold R. Lyon
